

This repository contains data and code underlying the manuscript “Impact of leaf phenology on estimates of aboveground biomass density in a deciduous broadleaf forest from simulated Global Ecosystem Dynamics Investigation (GEDI) lidar” (Cushman et al 2023 Environ. Res. Lett. <https://doi.org/10.1088/1748-9326/acd2ec>).

Included files are:

- CushmanEtAl_LeafPhenologyGEDI.R: R script to predict AGBD from GEDI L4A models, assess systematic prediction differences, and create results tables and figures

- CandidateModels.csv: details of GEDI L4A models used to predict AGBD

- Column names:

- FileName: Original model object file name
- Restriction: The feature set for the model (described in Methods section

2.5)

- Intercept: Fitted model intercept
- Var#: predictor variables 1-4
- a-d: Fitted parameters associated with predictor variables 1-4
- TransfVar: Transformation applied to predictor variables
- TransfAGB: Transformation applied to biomass values
- BackTransf: Backtransformation correction applied to model predictions
- RH_##: Whether each relative height metric was included in the model
- LowestRH: Smallest relative height metric included in the model
- TallestRH: Largest relative height metric included in the model
- RMSE_On: RMSE of predicted biomass from leaf-on data (calculated by running CushmanEtAl_LeafPhenologyGEDI.R) in % of site mean biomass
- RMSE_Off: RMSE of predicted biomass from leaf-off data (calculated by running CushmanEtAl_LeafPhenologyGEDI.R) in % of site mean biomass
- Bias_On: Bias of predicted biomass from leaf-on data (calculated by running CushmanEtAl_LeafPhenologyGEDI.R) in % of site mean biomass
- Bias_Off: Bias of predicted biomass from leaf-off data (calculated by running CushmanEtAl_LeafPhenologyGEDI.R) in % of site mean biomass
- ModelID: Unique identifier for each row

- LeafOnSimulatedMetricsAndBiomass.csv: simulated GEDI RH metrics from leaf-on conditions and field-estimated aboveground biomass density

- Column names: See documentation for the GEDI waveform simulator (<https://bitbucket.org/StevenHancock/gedisimulator/src/master/>).

- A few changes/additions were made to the default column names:
 - “rhReal” metrics were renamed from “rhReal_##” to “RH_##” for all relative height metrics
 - Columns were added for interaction terms among (rhReal) relative height metrics in the form “RH_##_RH_##”
 - AGBD_Mgha: Column with the estimated biomass density associated with each footprint, from inventory plot data (Mg/ha)

- LeafOffSimulatedMetricsAndBiomass.csv: simulated GEDI RH metrics from leaf-off

conditions and field-estimated aboveground biomass density
- Column names: same as for leaf-on file above
